To Whom it may Concern

This is a letter of reference in regard to a retubing of the Generating Bank of our #3 Foster Wheeler power boiler.

This job, which included replacement of 2736 generating bank tubes, was completed by Canadian Industrial Mill Services Ltd in February of 2003.

The whole job was carried out safely, with attention to every detail.

For example, the wrecking out of the tubes was of concern to us, as the number of people working in the area meant the air quality would probably be an issue.

CIMS provided a ventilation proposal for this project which more than covered any concerns that we might have.

In addition, we had planned for three 900 psi hydro static tests to be carried out. As it turned out we only had to do one, as the boiler proved to be tight after one test.

We would not hesitate to recommend CIMS for this type of work.
